Airborne MAVs Mapping: general context

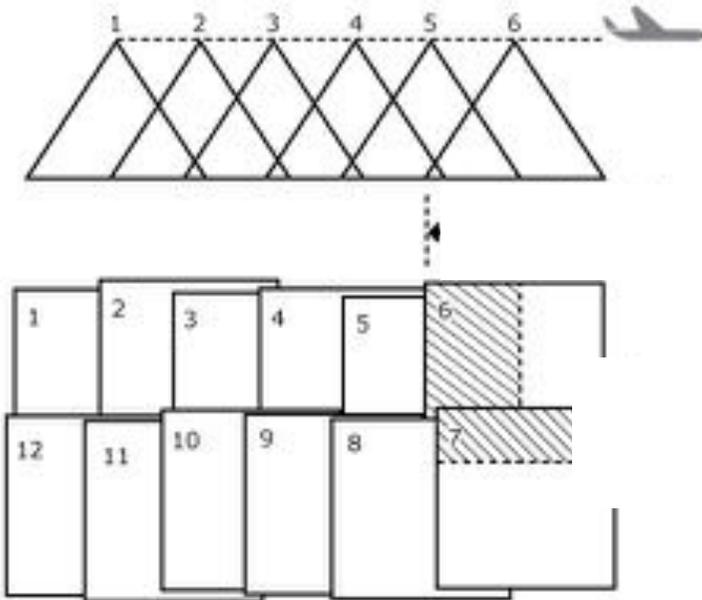

□ Agenda

- main challenges
- answers / local example
- details & verification

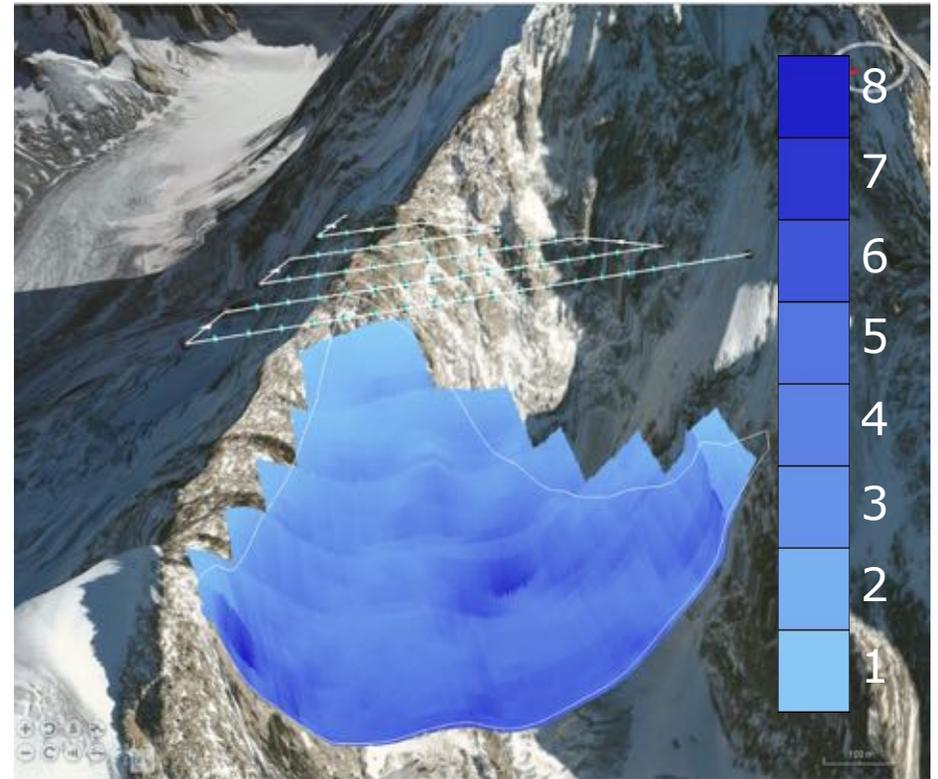

Challenge 1: GSD

□ Flat terrain

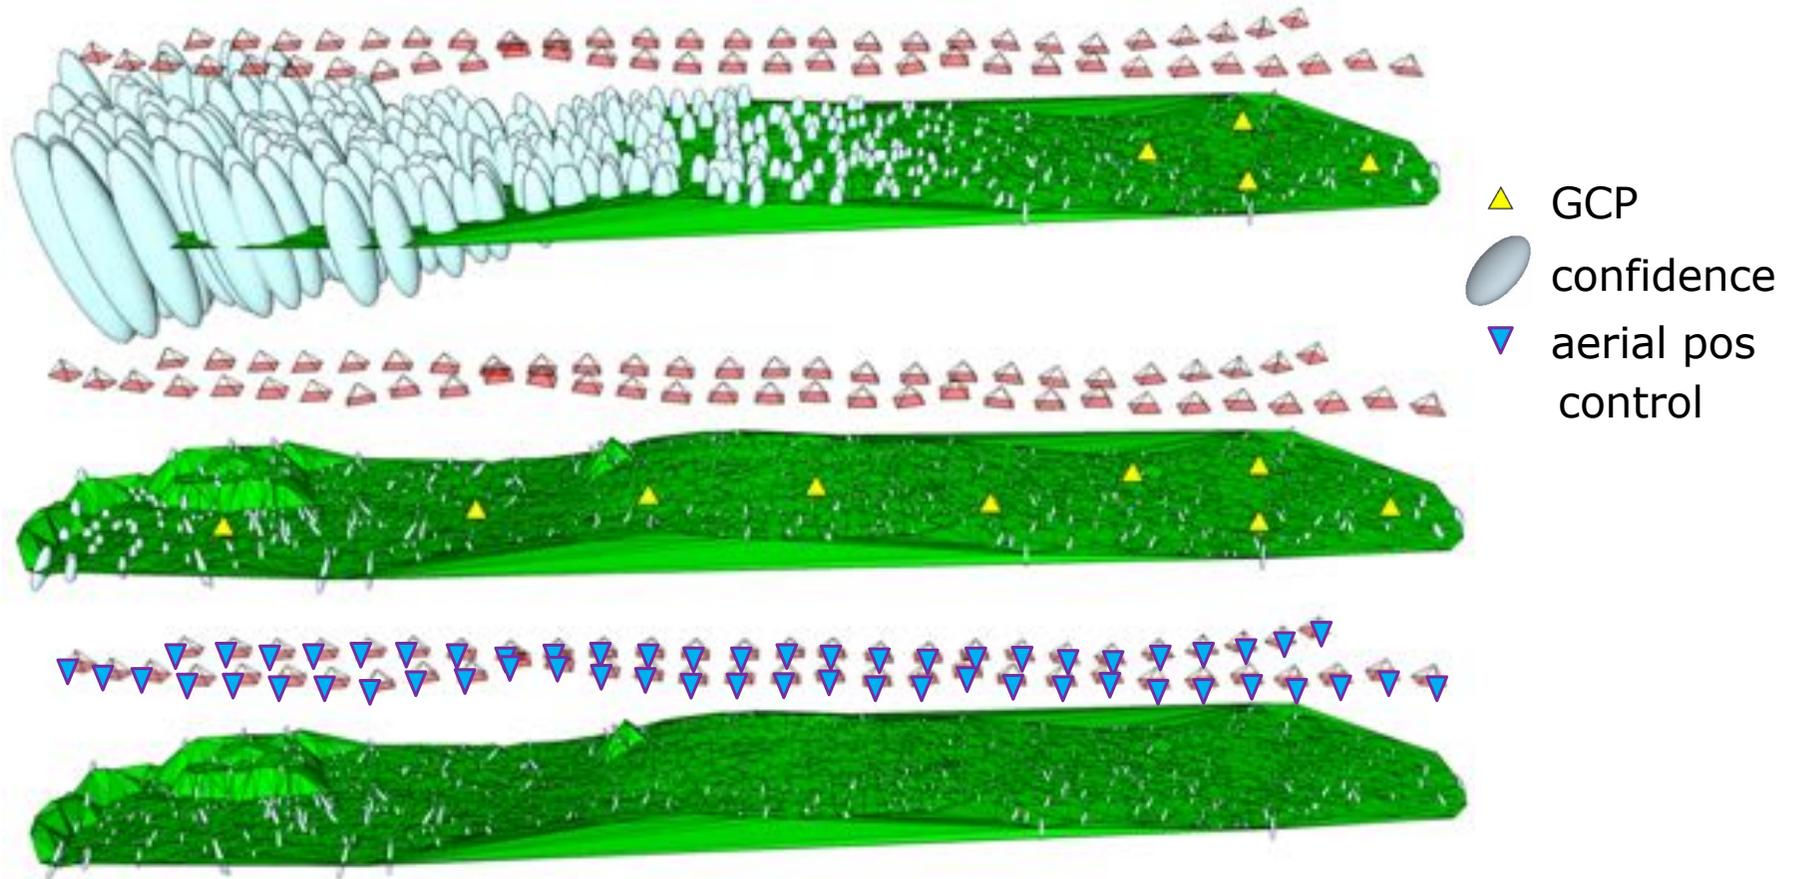

■ $GSD = h * px / c$

□ Mountains ?

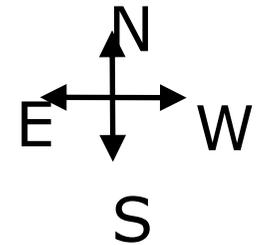

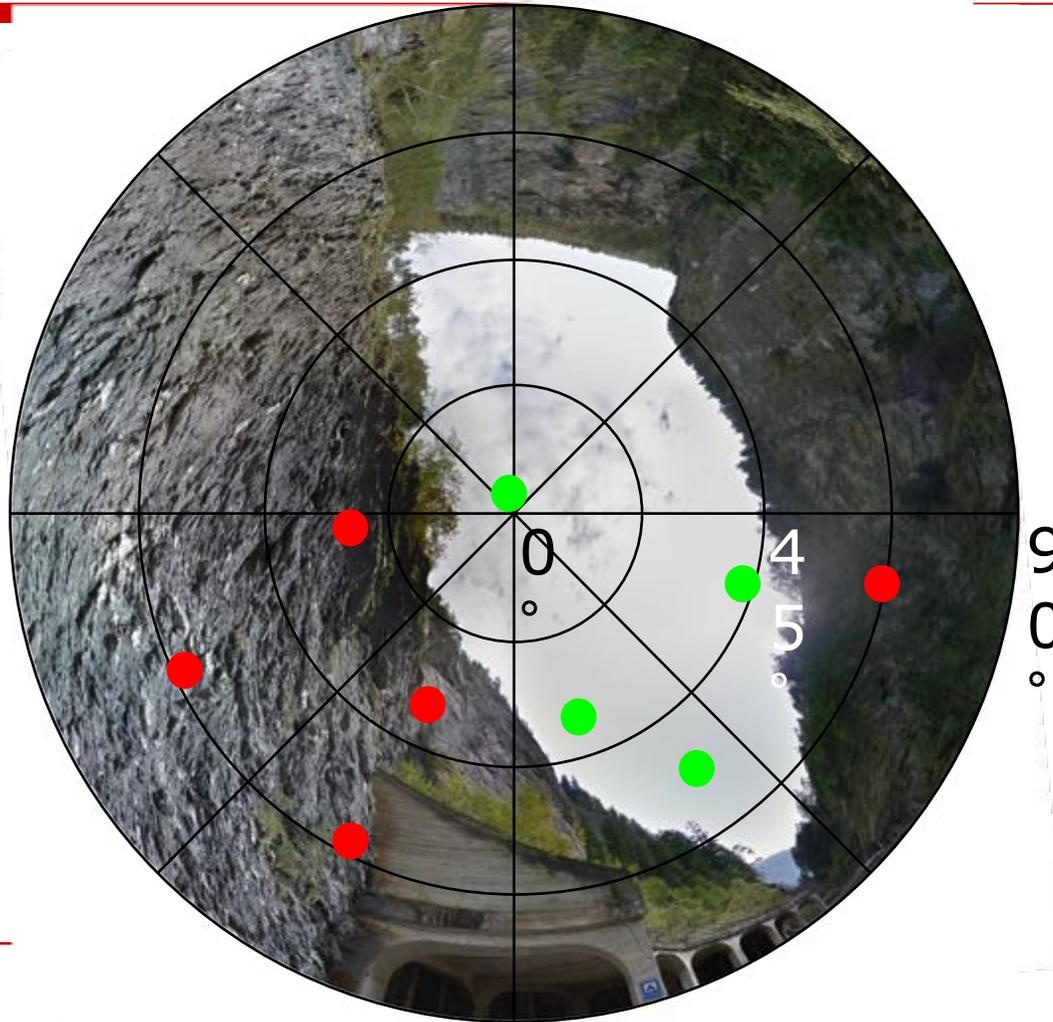

Challenge 2: "Bierbauch" rise and fall

Challenge 3: GNSS satellite coverage

□ Sky view

Mountain canyon

- Visible satellite
- Non visible satellite

Challenge 4: computer vision

- Automated tie-points
 - Area dependences
 - #
 - Quality

Conclusion

- ❑ Mountains: challenges also for drone-mapping

- ❑ Methodology
 - Before flight: simulate: TP distrib., ChkPts, aerial control
 - After flight: repeat with real image pos + aerial control quality
 - Field decision: + GCP, +photo, +RTK /vs different time

- ❑ Verification
 - > 10 flights in mountain environments under different conditions (visibility, terrain, GNSS coverage)
